

PAOLA TURANO received her Ph.D. in Chemical Sciences at the University of Florence in 1993. She became researcher in Chemistry at the Faculty of Sciences (University of Florence) in 1997, and Associate Professor of General and Inorganic Chemistry in 2002. The main topics of her research activity are: development and application of solution and solid state NMR approaches for the characterization of biomolecules, mainly focusing on paramagnetic metalloproteins and high molecular weight systems; characterization of protein-protein functional interactions and protein-small molecules interactions in drug design projects; structural biology of proteins involved in iron metabolism; NMR-based metabolomics and biobanks. Paola Turano was the recipient of the "Raffaello Nasini Medal 2003" of the Inorganic Chemistry Division of the Italian Chemical Society. In the period 2012-2014 she was the Chair of the Division of Chemistry in Life Sciences of EuCheMS. Presently she is Chair of the Scientific Committee of the da Vinci European Biobank and member of the GIDRM Council. Author of about 110 publications in peer reviewed international journals plus several book chapters, she has been invited to give talks to several National and International meetings and has organized a number of International and National conferences and schools.
